Pyridoxine Injection/Oral is used to treat the following:
Pyridoxine is a vitamin that helps keep nerves, skin, red blood cells, and mucous membranes healthy. Most people who have a normal diet do not need extra pyridoxine (vitamin B6). However, vitamin B6 is used to treat or prevent a lack of body vitamin B6, to treat a certain blood problem (sideroblastic anemia), to prevent a certain nerve problem (peripheral neuropathy) caused by certain drugs (e.g., isoniazid, penicillamine), to prevent seizures from a certain medication (cycloserine), or to treat seizures in newborn infants who are not responsive to the usual medications. Lack of Vitamin B6, Lack of Vitamin B6 caused by a Medication, Seizures that are Dependent on Vitamin B6 Therapy.

Pyridoxine Oral may also be used to treat:
Vitamin B6 Dependency, Homocystinuria Type III, Homocystinuria Type I, Deficiency of the Enzyme Cystathionase, GABA Transaminase Deficiency, High Amount of Oxalic Acid in the Urine, Sideroblastic Anemia, Nausea and Vomiting of Pregnancy, Excessive Vomiting in Pregnancy, Seizures due to Poisoning by the Drug Cycloserine, Seizures due to Poisoning by the Drug Isoniazid, Nerve Damage caused by Hydrazine Poisoning, Seizures caused by Gyromitra Mushroom Poisoning

Pyridoxine does not usually cause side effects when used in recommended doses. However, pyridoxine may cause reversible side effects if taken in doses that are larger than recommended. Tell your doctor immediately if any of these unlikely but serious side effects occur: headache, tingling of the hands/feet, nausea, problems sleeping.
A very serious allergic reaction to this drug is rare. However, seek immediate medical attention if you notice any symptoms of a serious
allergic reaction, including: rash, itching, swelling, severe dizziness, trouble breathing.

This is not a complete list of possible side effects. If you notice other effects not listed above, contact your doctor or pharmacist.

Do not start, stop, or change the dosage of any medicine before checking with your doctor or pharmacist first. This drug should not be used with the following medications because very serious interactions may occur: altretamine, cisplatin, levodopa, phenobarbital, phenytoin. This vitamin may interfere with a certain laboratory test (urobilinogen using Ehrlich reagent).
